

ADHD PEDIATRIC RESEARCH TRIAL

Concerned that your 4-5 year old child may have

Attention Deficit Hyperactivity Disorder?

Symptoms may include

Difficulty with attention and concentration,
easily distracted, and not listening

Hyperactivity, inability to sit still, excessive talking, and impulsive behavior

Michael Greenbaum, MD, Child Psychiatrist, is looking children ages 4-5 for a study of an investigational medication for ADHD. Participants may receive behavior therapy and study medication.

Participation may last up to 12 months.

Qualified participants will receive all study related evaluations and study medication at no cost, as well as reimbursement for travel to study visits.
